

Centrifugal fans

Spare parts guide

Centrifugal fans

Benefits

BAC centrifugal fans are designed, tested, manufactured and rated by BAC for **optimum performance**. These centrifugal fans are very quiet for minimal surrounding noise.

Standard features

- Protected with the [Baltibond hybrid coating](#). Perfect for use in the moist cooling tower environment, ensuring **maximum service life**.
- Nearly noiseless.
- Shipped with the necessary hub clamps, hardware and adhesive for installation.

Caution tip !

Selecting a fan requires knowledge of the cooling tower system curve (air flow, pressure drop). Changing to a non-original fan can severely deteriorate your cooling tower thermal performance and increase your process energy costs.

Want to replace the centrifugal fans of your BAC cooling equipment? Contact your [local BAC representative](#).
